

# OKV Inventory Management System

## Online Edition — Admin & Owner Manual

Everything the Admin of an organisation needs: setup, day-to-day operations, Team & Access, Communications, Team Chat, and Upgrade & Subscription.

Developed by **OKV Technology Consults**

Website: [www.okvtechnology.com](http://www.okvtechnology.com)

# 1. Getting Started

When you sign up, your organisation gets a real 7-day free trial with full access — no card required. You land straight in the app, already signed in as the Admin.

## 1.1 Installing the app

OKV IMS is a Progressive Web App (PWA) — install it to your phone or computer home screen for an app-like experience that also works offline. From the login screen, follow your browser's "Add to Home Screen" / "Install" prompt, or share the Install Link with staff from Team & Access.

## 1.2 Logging out

Every dashboard has a Log Out option in two places: the sidebar (bottom, above Settings) and the account menu in the top-right corner (tap your avatar). Logging out ends your session on that device.

**Note:** If you ever can't find a button on a small screen, tap the menu icon (■) top-left to open the sidebar.

# 2. Dashboard & Core Modules

The Dashboard gives you a live snapshot: inventory value, revenue, profit, and reorder alerts. The sidebar is grouped by function:

| Group          | Modules                                                                             |
|----------------|-------------------------------------------------------------------------------------|
| Sales          | Sales Entry (POS), Sales Orders, Customers                                          |
| Inventory      | Current Inventory, Stock In, Stock Out, Adjustments, Batch & Expiry, Reorder Alerts |
| Purchasing     | Purchase Orders, Suppliers                                                          |
| Catalog        | Product Master, Scan Barcode                                                        |
| Finance        | Expenses, Profit & Loss, Reports (Growth plan)                                      |
| System         | Team & Access                                                                       |
| Communications | Message Members, Team Chat                                                          |
| Account        | Upgrade & Subscription, User Manual, Settings                                       |

# 3. Team & Access

Add staff, assign roles, and control who can sign in — Admin only.

- **Add User** — set a username/email and temporary password; tick one or more roles.
- **Edit Roles** — roles are additive: a user with two roles gets the combined access of both.
- **Set Password** — reset a staff member's password directly (staff have no self-serve "forgot password").
- **Suspend / Activate** — Suspend blocks sign-in immediately and force-logs-out any active session.
- **Delete** — removes the account (the Admin account itself can't be deleted).

| Role                            | Typical access                                                          |
|---------------------------------|-------------------------------------------------------------------------|
| Inventory Super Admin           | Everything (same breadth as Admin, minus Team & Access)                 |
| Store Manager                   | Everything except Team & Access                                         |
| Storekeeper / Warehouse Officer | Products, Inventory, Stock In/Out, Reorder, Adjustments, Batch & Expiry |
| Sales Officer                   | Products, Customers, Sales Orders, POS, Message Members                 |
| Cashier / POS Operator          | POS, Customers, Message Members                                         |
| Procurement Officer             | Products, Suppliers, Purchase Orders, Reorder, Stock In                 |
| Inventory Auditor / Viewer      | Inventory, Batch & Expiry, Profit & Loss, Reports (read-focused)        |

Dashboard and Settings (own password) are available to everyone regardless of role. Chat and the User Manual are too.

## 4. Message Members (Communications)

Send announcements, personalized notes, or birthday/anniversary greetings to your Customers — individually or all at once — by Email, SMS, and/or WhatsApp. Open **Message Members** in the sidebar.

### 4.1 Choosing an audience

- **All Customers** — every customer on file.
- **Select Individually** — tick specific customers from the list.
- **Customers with a Birthday Today** — auto-matches today's date against each customer's Birthday field.
- **Customers with an Anniversary Today** — same, using the Anniversary field.

Add a customer's Email, Birthday, and Anniversary from **Customers** → **Add/Edit Customer** so they can be reached and picked up by the automatic audiences above.

### 4.2 Writing the message

Pick a Message Type (Announcement, Personalized, Birthday, Anniversary, Other), choose one or more channels, add a Subject (used for Email) and a Message. Use `{{name}}` anywhere in the body — it's replaced with each recipient's own name automatically, so one message still feels personal to everyone.

**Note:** Email sends immediately, no setup needed. SMS and WhatsApp need a gateway (e.g. Termii, Twilio, WhatsApp Cloud API) configured once by whoever manages your Apps Script backend — see the README, Section 7. Until then, SMS/WhatsApp sends are logged as "Gateway not set up" instead of failing silently.

Every send — successful or not — is logged under "Recent Messages" at the bottom of the page, so you always have a record of who was contacted, when, and how.

## 5. Team Chat

A simple, built-in messaging thread between the Admin and each staff member — no external chat app needed. As Admin, pick a team member from the dropdown at the top of the Team Chat page to open their conversation. Staff members always chat directly with the Admin. Messages refresh automatically every 20 seconds while the tab is open, or immediately after you send one.

## 6. Upgrade & Subscription

Admin-only. This is where you pay for and activate a paid plan once your trial is ending, or upgrade/renew at any time.

### 6.1 How it works

- Check exact prices for your plan and billing cycle on the Pricing page.
- Transfer the amount by bank to the account shown on the Upgrade & Subscription tab.
- Fill in the short form, upload a screenshot of the payment, and submit.
- OKV Technology Consults reviews it and emails you the outcome — usually within an hour.
- Once confirmed, your plan upgrades automatically. It shows up on your dashboard on its own — no need to log out and back in.

|                |                        |
|----------------|------------------------|
| Account Number | 8104141138             |
| Bank           | OPA MFB                |
| Account Name   | OLASILE KEHINDE VICTOR |

The "Your Upgrade Requests" table on the same page shows every submission and its status: Pending Review, Confirmed, or Rejected. The Trial banner on your Dashboard and the "Upgrade" pill in the top bar both count down your remaining days and link straight into this tab.

**Note:** Questions about a payment or your plan? OKV Technology Consults — [technologyokv@gmail.com](mailto:technologyokv@gmail.com) · +234 810 414 1138 (call/WhatsApp) · [www.okvtechnology.com](http://www.okvtechnology.com)

## 7. Getting Help

This system is developed and supported directly by OKV Technology Consults — real, local support, not a faceless call centre.
